

NXT - 4225

LUBRICANTS

Superior refrigeration oil

for HFC systems

NXT-4225 is specially designed for the use in HFC and blended refrigeration systems and is compatible with the most common POE compressor oils. The design was based on two aspects of oil in refrigerant applications: oil lubrication and oil separation.

The excellent stability of NXT-4225 in HFC applications results in a very low solubility, keeping the oil pressure more stable and reducing oil carry-over by 50 percent. Switching to NXT-4225 oil does not require flushing or any special change of the procedures.

- Excellent low temperature fluidity
- Excellent film strength and anti-wear properties
- Excellent carbon and varnish control to help reduce deposits
- Very low volatility
- Fair price

NXT-4225 is the alternative to the most competitive HFC compressor oils
