

NXT-4114

LUBRICANTS

High pressure mineral oil

for CFC and HCFC

Refrigerant applications

NXT-4114 is specially designed for the use in High Pressure Applications. NXT-4114 have exceptional solubility in CFC, HCFC and Blended Refrigerants. The design was based on two aspects of oil in refrigerant applications: oil lubrication and oil separation.

The excellent stability of NXT-4114 in CFC and HCFC applications results in a very low solubility, keeping the oil pressure more stable and reducing oil carry-over. Switching to NXT-4114 oil does not require flushing or any special change of the procedures.

- Superior Solubility in HCFC and Blended Refrigerants
- Excellent protection against wear and friction
- Excellent Coolant properties
- Long fluid life
- Fair price

NXT-4114 is the alternative to the most competitive CFC and HCFC applications
